HACKANOVA 5.0

# Problem Statement

**PROBLEM STATEMENT:**

**●Millions of creditworthy students, gig workers, and small vendors lack a traditional CIBIL score, locking them out of the financial system.**

**●Existing alternative scoring systems are purely B2B, lack transparency, and completely ignore the student demographic.**

**●Users suffer from slow score updates and have no visibility into why their creditworthiness is rated poorly.**

# Objectives

- **Provide a credit scoring system for students and new-to-credit users who lack a traditional CIBIL score using Agentic AI.**
- **Use alternative financial data patterns like recharge history, digital payments, and spending behavior to evaluate creditworthiness.**
- **Ensure transparency in credit scoring so users can understand factors affecting their score.**
- **Offer real-time score updates based on users' financial activities.**
- **Help banks and NBFCs assess borrowers with limited credit history.**

# Idea/Approach

1)Alternative Data Collection
The platform gathers non-traditional financial signals such as mobile recharge patterns, digital payments, spending habits, and transaction frequency to evaluate financial behavior of users who lack a traditional credit history.

2)User Behavior Analysis
Machine learning models analyze these behavioral patterns to identify financial discipline, payment consistency, and risk indicators.

3)Student Credit Score Generation
A dedicated scoring algorithm generates a transparent Student Credit Score, specifically designed for students and new-to-credit individuals.

4)Real-Time Score Updates
The system continuously updates the credit score based on the latest transactions and spending behavior, giving users immediate feedback on their financial habits.

5)Transparent Insights Dashboard
Users can see exactly why their score increased or decreased, improving financial awareness and enabling better financial decisions.

6) Lender Integration
Banks and NBFCs can use this alternative credit score to safely evaluate borrowers who do not have a traditional CIBIL score.

# SWOT Analysis

| | |
|---|---|
| **Strengths**<br>• Alternative credit scoring for users without CIBIL<br>• Transparent score insights for users<br>• Dedicated Student Credit Score<br>• Data-driven ML based evaluation | **Weaknesses**<br>• Depends on availability of user transaction data<br>• Model accuracy improves only with larger datasets<br>• Initial trust building with lenders required |
| **Opportunities**<br>• Huge new-to-credit population in India (500M+)<br>• Partnerships with banks and NBFCs<br>• Integration with UPI and telecom data<br>• Expansion into micro-loans and fintech services | **Threats**<br>• Regulatory challenges in financial data usage<br>• Competition from existing credit bureaus<br>• Data privacy and security concerns<br>• Adoption resistance from traditional lenders |

HACKANOVA 5.0

# Conclusion

**CreditBridge provides a transparent alternative credit scoring system for students and new-to-credit users. By analyzing digital financial behavior, the platform helps lenders assess creditworthiness while enabling millions of individuals to access financial opportunities.**

# Future Scope

- **Integration with UPI and telecom data for more accurate scoring**
- **Partnerships with banks and NBFCs for instant micro-loans**
- **Improved AI models for better risk prediction**
- **Expansion to support gig workers and small businesses**
